Hotels.com

The image shows a mobile app interface for filtering hotel results. At the top, a status bar displays 'AT&T', signal strength, Wi-Fi, time '7:22 PM', and battery level. Below this is a red header bar with 'Cancel' and 'Done' buttons, and a title 'Filter by...'. The filter options are: 'Hotel name contains' with a text input field; 'Star rating' with five radio buttons labeled 1 to 5; 'Max price (USD)' with a slider set to 'Selected: none' and a scale from '-' to 'Max'; and 'Min guest rating' with a slider. The bottom of the screen shows a row of numbers 5, 4, 3, 2, 1, likely representing a rating scale.

The other way is with the `setup.js` lines to select between `notesdb-sql`

```
// var notesdb = require('./notesdb-sqlite3');  
var notesdb = require('./notesdb-mongoose');
```

Make the change shown here to swap script this way:

```
$ node setup
```

Nothing is printed, but you can use `show.js` there.

Display notes on the console

Displaying every item from the database used earlier. Simply make the same change as follows:

finished.

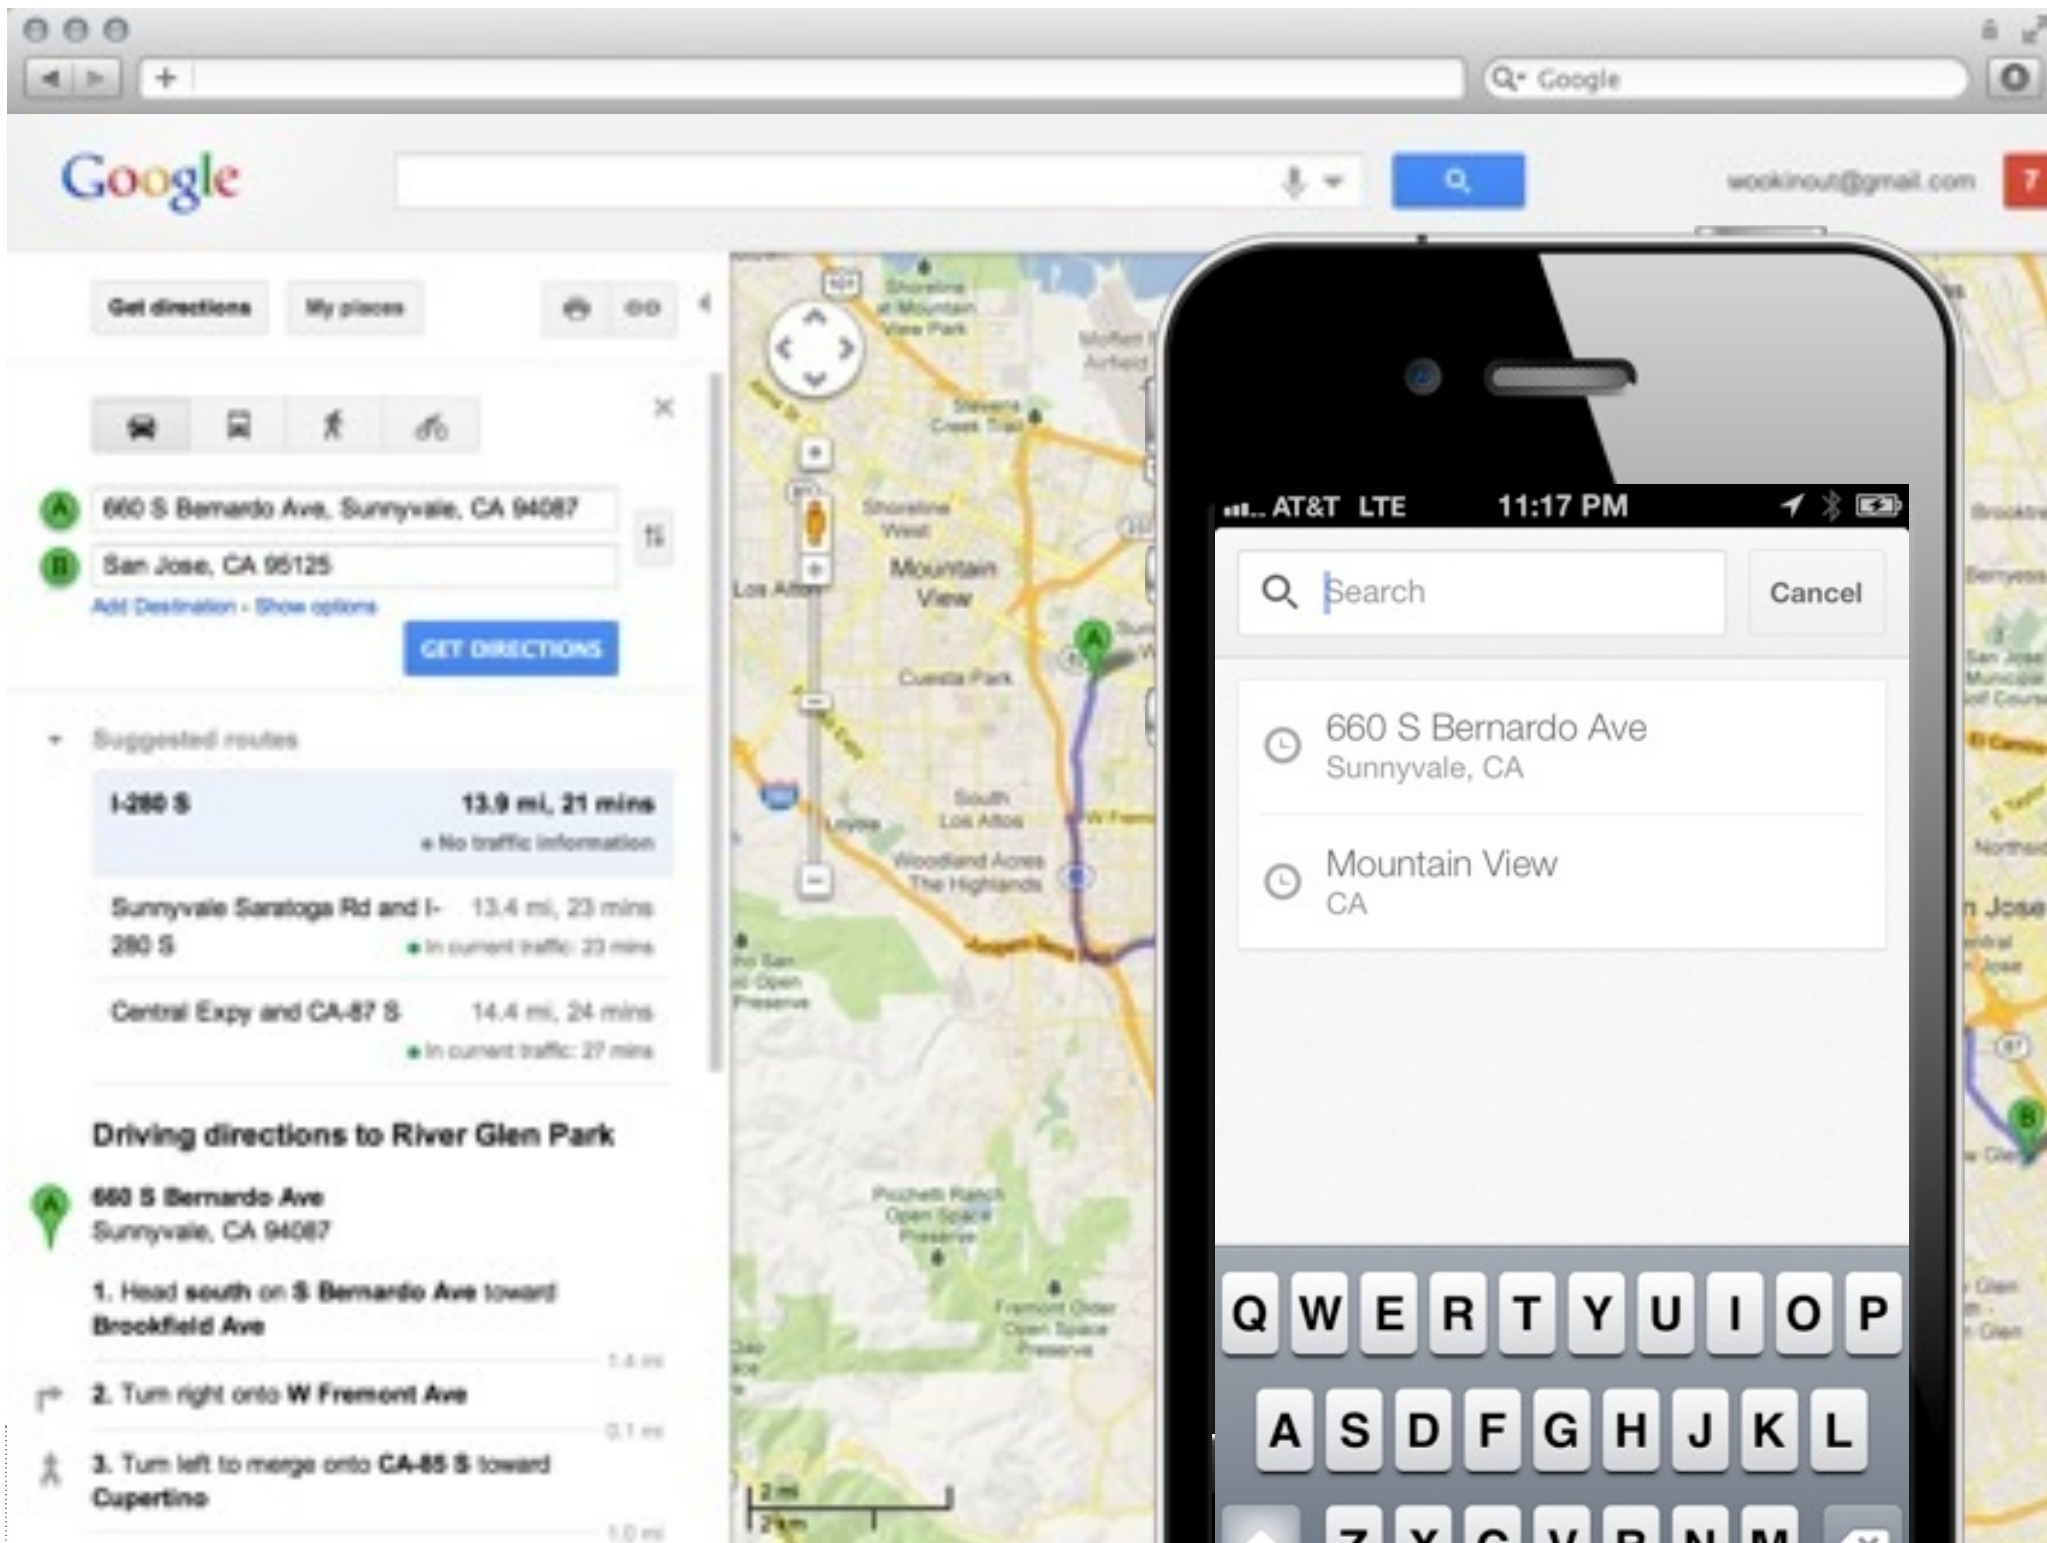

Display notes on the console show.js

As we mentioned earlier, the `notesdb.forAll` function enables retrieving every note in the database. We can use it to print the database to the console as follows:

```
var util = require('util');  
var notesdb =  
  require('./notesdb-sqlite3');  
// var notesdb = require('./notesdb-mongoose');  
notesdb.connect(function(err)
```
